Continuation of 3. Applicant's reply has overcome the following rejection(s): objection to the drawings regarding the reference numbers, but not the objection to the drawings for failure to show claimed subject matter. The Applicant's reply overcomes the objection to the title.

Continuation of 5. does NOT place the application in condition for allowance because: The amendment filed 1/13/2004 included the minor informalities to the claims (misspellings) that needs to be corrected. The Applicant's argument regarding inherency is not persuasive. The lubricant is between the rotor and stator, therefore it must help to maintain the spacing between them. Whether there are additional supports between the rotor and stator is not at issue because it is not a claim limitation. The Applicant's argument that lwasaki does not teach the fluid maintaining the spacing is not persuasive. See lwasaki col. 11, lines 25-38 teaching the fluid does maintain the gap between the rotor and stator during operation. The Applicant's argument regarding Kusagi and Tanaka is not persuasive because there is motivation to provide stable rotation in electrostatic actuators. The Applicant's argument regarding high speed and degrees of rotation are not persuasive because they are not claimed. The Applicant's argument regarding expectation of success is not persuasive because bodily incorporation is not required, and there is a high reason for expecting success since they are both providing rotational support in electrostatic actuators.
